Background corrections for Mg, Al, Si, Ca, Fe, and Mn in garnet, rutile, and ilmenite were done using M whereas a LOP correction was used for Ti. In plagioclase, Na, Al, Si, K, and Ca were corrected for backg and Fe was corrected using LOP. For muscovite, Al, Si, and K analyses used MAN corrections while F, N and Fe used LOP corrections. Background corrections for biotite are the same as those for muscovite e correction is used for Fe in biotite.
